## Project:

Repair recently renovated executive dining area floor

## Situation:

The original flooring contractor had installed a very expensive two-tone floor that featured a wave-like demarcation line between the two colors; a custom red and beige.

The floor was made of some type of rolled mat material to give it the look almost of a bamboo floor. It was failing in many places, faded in areas exposed to sunlight, and was scuffed and gouged by normal use of the facility

## Constraints:

The project had to be completed over a major holiday weekend. Access was permitted at 5pm on Friday and the floor had to be ready by Monday at 9am for the equipment and furniture to be reinstalled.

## Vikon Solution:

Custom match the company color scheme with a “green” product that didn’t use solvents, set quickly, and was back in service immediately. Vikote series 9050 polyurea, broadcast vinyl chips, and one coat of clear polyurea.

## Prep:

A week prior to commencing, Vikon made a custom match from provided samples. The match was approved, formulated and delivered onsite. On Friday evening the crew stripped the beige side and removed the adhesive using a 30 grit diamond abrasive. The section was then primed using the Vikote W-3 series primer.

## Installation:

The red floor was then laid back down and the demarcation line was traced and replicated exactly. The Saturday morning crew applied a base coat of beige Vikote series 9050 polyurea, broadcast vinyl chips, and one coat of clear polyurea to seal the application. The next shift then repeated the preparation process to the red section. On Sunday morning the crew repeated the three coat process on the red section and 3 hours later applied a 4th coat consisting of Vikote Clear to achieve a combined 20 mil thick application.

## Results:

Installation personnel were off premises by 8pm Sunday. The end result was a high gloss, easily maintained durable floor. Where high performance, decorative, zero solvent, zero VOC floor coatings are required due to quick “return to service” mandates, Vikon products are the solution of choice.
